ULTIM8DECK COMPOSITE DECKING

July 2018

A composite deck that cuts, drills and screws just like a hardwood timber deck!

- Solid High Density Core
- Shapes & routers easily
- Scratches easily repaired
- Solid uniform color throughout
- Resistant to short term water submersion
- Ideal around wet areas and pools
- Will not decay
- Install using woodworking tools
- No special clips or screws required
- High slip resistance - R11 (Ramp Test)
- Can be installed with the Camo Hidden Fastener System
- 15 year warranty

Ideal for Domestic and Commercial Projects

ULTIM8® Composite Decking products have combined two sustainable and responsible materials. Using the high strength of plantation-grown bamboo, and the durability and weather resistance of recycled (HDPE) waste plastic, ULTIM8 Deck gives you the look and feel of natural timber, without most of the usual hassles of maintaining timber decking.

Predrilling and Countersinking is required before fastening. Nail fixings are not recommended.

Also refer to Maintenance, Installation and Warranty sheets.

Versatile, Durable, and Repairable

ULTIM8 Decking will never require oiling or coating and can endure all of New Zealand's harsh seasons and climates. Properly maintained, it will retain its original colour for a minimum of 15 years. The sanded finish means heavy scuffs and marks can be easily removed with heavy grit (40-60) sandpaper to restore its original finish.

Performance

ULTIM8 Decking will maintain its structural integrity and performance in high temperatures up to 52deg C for extended periods of time. ULTIM8 Decking has been tested to ensure it meets the requirements of the NZBC D1 Access Routes, it achieves a slip resistance rating of R11 (Ramp Test equivalent to Appendix D NZS 4586).

Colour	Decking (mm)
Weathered Grey	137 x 23
Silver Back Grey	137 x 23
