

DON'T BE AFRAID OF THE DARK...

WITH CORECLAD® PRIMED, YOU DONT HAVE TO BE.

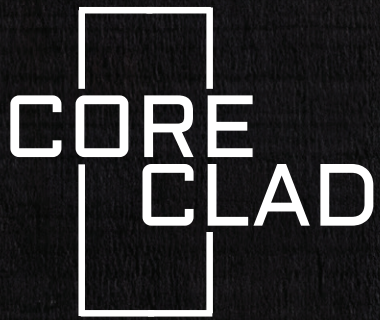

One of the distinct advantages of using IBuilt™ CoreClad® Primed as exterior cladding is the ability to paint it in any number of today's fashionably dark colours. Even black!

To ensure maximum product performance and longevity, particularly when using dark-coloured exterior cladding, it is critical that the following criteria are followed:

- CoreClad® Primed must be used.
- Use Dulux Weathershield® Colourguard® or Resene CoolColour® for best results.
- 3 topcoats must be applied. Not only will your exterior cladding look better it will perform better too.
- Carry out regular paint maintenance. The use of dark paint colours requires an increase in coating maintenance over the lifetime of the cladding.

CORECLAD® PRIMED

FEATURES AND BENEFITS

- CoreClad® Primed uses a factory applied premium acrylic primer which provides an optimal base coat for acrylic topcoat systems. This means a better finish and improved longevity.
- Eliminates the need for a primer coat to be applied once installed, saving time and money.
- Face, edges, and bottom 150mm of the back of the sheet are fully primed, allowing for faster onsite installation.

For important installation information please refer to the IBuilt website.
